

# Global AI Legislation

**Discussion Leads: Lee Matheson and Josh Lee Kok Thong**

## SESSION DESCRIPTION

Principles, practices, then passed laws – the world is seeing a shift in the global AI regulatory conversation as legislators begin to draft, enact, and implement omnibus AI laws. For example, the EU AI Act implementation is reaching full speed, and new AI laws are either being adopted (South Korea), quickly advancing (Brazil), or being prepared (Japan and China). At the same time, [some have suggested](#) that fast-moving AI tech, business practices, and individuals' engagement with AI tools should prompt policymakers to revisit and hone aspects of the AI Act.

What factors and considerations drive the substance and form of these AI laws? Are there emerging patterns that might be discerned from these jurisdictions' regulatory approaches? What strategies and best practices can companies across industries take to address global compliance challenges effectively? This session will look comparatively across jurisdictions to discuss implications, emerging compliance strategies, and best practices across industries.

## 5–8 KEY DISCUSSION QUESTIONS

1. What factors and considerations are driving the shape of emerging AI laws globally?
2. Are there emerging patterns that might be discerned from the regulatory approaches of jurisdictions that have passed (or are expected to soon pass) AI laws?
3. What might some of the hurdles and challenges that regulators in these jurisdictions be facing in operationalizing or implementing these AI laws?
4. What are the biggest compliance challenges you face in navigating AI laws across multiple jurisdictions?
5. How are your companies adjusting their AI governance strategies to keep pace with—or future—proof against—evolving AI regulations and regulatory approaches?
6. What strategies and best practices can companies across industries take to address global compliance challenges effectively?
