

RISK ASSESSMENTS

Discussion Leads: Lee Matheson + Jameson Spivack

SESSION DESCRIPTION

An opportunity for stakeholders to discuss a fast-moving issue central to AI and general privacy governance. Participants will have a chance to discuss how they are approaching the entire risk assessment life cycle, from preprocessing and privacy-by-design issues to continuous monitoring and post-deployment assessments, as well as planning for potential interactions with regulatory and enforcement authorities.

KEY DISCUSSION QUESTIONS

1. What solutions are you using as your baseline for data protection risk assessments?
2. How, if at all, are you integrating AI tools into your risk assessment processes?
3. How are you conducting AI risk assessments? Are you approaching these technologies as a unique or separate issue, or integrating legacy risk assessment processes?
4. Are you using shared templates for multiple processing activities, or treating each new documentation task on a case-by-case basis?
